Stable Modules and the D(2)-Problem - E. A. Johnson 2003-09-11

This 2003 book is concerned with two fundamental problems in low-dimensional topology. Firstly, the D(2)-problem, which asks whether cohomology detects dimension, and secondly the realization problem, which asks whether every algebraic 2-complex is geometrically realizable. The author shows that for a large class of fundamental groups these problems are equivalent. Moreover, in the case of finite groups, Professor Johnson develops general methods and gives complete solutions in a number of cases. In particular, he presents a complete treatment of Yoneda extension theory from the viewpoint of derived objects and proves that for groups of period four, two-dimensional homotopy types are parametrized by isomorphism classes of projective modules. This book is carefully written with an eye on the wider context and as such is suitable for graduate students wanting to learn low-dimensional homotopy theory as well as established researchers in the field.

Like You'd Understand, Anyway - Jim Shepard 2008-08-12

Following his widely acclaimed Project X and Love and Hydrogen—"Here is the effect of these two books," wrote the Chicago Tribune: "A reader finishes them buzzing with awe"—Jim Shepard now gives us his first entirely new collection in more than a decade. Like You’d Understand, Anyway reaches from Chernobyl to Bridgeport, with a host of narrators only Shepard could bring to pitch-perfect life. Among them: a middle-aged Aeschylus taking his place at Marathon, still vying for parental approval. A maddeningly indefatigable Victorian explorer hunting his expedition, whaleboat and all, through the Great Australian Desert in midsummer. The first woman in space and her cosmonaut lover, caught in the star-crossed orbits of their joint mission. Two Texas high school football players at the top of their food chain, soliciting their fathers’ attention by leveling everything before them on the field. And the rational and compassionate chief executioner of Paris, whose occupation, during the height of the Terror, eats away at all he holds dear.

D. Wayne: the High-Rolling and Fast Times of America's Premier Horse Trainer - Carlo DeVito 2002

The first biography of the most successful and controversial horse trainer of all timeHis methods have been ridiculed, his business tactics declared questionable, and his plans derided. Yet, not even the most stiff-necked Southern patrician can deny that D. Wayne Lukas is the most successful horse trainer in history. In 1999, Lukas became the first trainer to surpass $200 million in earnings. He has won 12 Triple Crown events (including 6 in a row)13 Breeders' Cups, 4 Kentucky Derbies, 5 Preaknesses, and 3 Belmonts. If horse racing is the sport of kings, then D. Wayne Lukas is surely its emperor. Now, in D. Wayne: the first book-length biography of D. Wayne Lukas—sportswriter Carlo DeVito tells the riveting life story of the man known throughout the sports world as the "Vince Lombardi of horse racing." He reveals the unorthodox business tactics D. Wayne used to wrest control of thoroughbred racing away from the handful of wealthy families who had held it for two centuries and to change the business forever. And with the help of candid interviews with Lukas rivals and fans, colleagues and competitors, and others, DeVito paints a fascinating portrait of the man who embodies Americans' most cherished images of themselves—self-made, innovator, and cowboy. The first biography of the most successful—and controversial—horse trainer of all timeD. Wayne Lukas has trained more winners, won more races, and amassed a greater fortune than any horse trainer in history. His unorthodox methods as well as his stormy personal life have also earned him a celebrity traditionally reserved for movie stars and big-league athletes. Now, in D. Wayne, journalist Carlo DeVito provides us with an intimate look into the life, times, and complex personality of one of the most colorful entrepreneurial mavericks of all time.

**RGB-D Image Analysis and Processing** - Paul L. Rosin 2019-10-26
This book focuses on the fundamentals and recent advances in RGB-D imaging as well as covering a range of RGB-D applications. The topics covered include: data acquisition, data quality assessment, filling holes, 3D reconstruction, SLAM, multiple depth camera systems, segmentation, object detection, salience detection, pose estimation, geometric modelling, fall detection, autonomous driving, motor rehabilitation therapy, people counting and cognitive service robots. The availability of cheap RGB-D sensors has led to an explosion over the last five years in the capture and application of colour plus depth data. The addition of depth data to regular RGB images vastly increases the range of applications, and has resulted in a demand for robust and real-time processing of RGB-D data. There remain many technical challenges, and RGB-D image processing is an ongoing research area. This book covers the full state of the art, and consists of a series of chapters by internationally renowned experts in the field. Each chapter is written so as to provide a detailed overview of that topic. RGB-D Image Analysis and Processing will enable both students and professional developers alike to quickly get up to speed with contemporary techniques, and apply RGB-D imaging in their own projects.
