Immune-Mediated Disease | National Multiple Sclerosis Society

Multiple sclerosis is considered to be an immune-mediated disease in which the body's immune system attacks the central nervous system (CNS). Most MS experts believe it to be an autoimmune disease, although no specific antigens (proteins that stimulate the immune system) have been identified in MS.

Health and Illness in History, Science and Society

Jan 25, 2018 · That is to say, the concept of health is indeed relative and it is the result of an interesting evolution of the concept of illness. From the first approaches - dealing with the mere treatment of the symptoms - to the promise of a free-from-pain society, science and economics have played a significant role in redefining the dualism health/illness.
