**Virus - Wikipedia**
A virus is a submicroscopic infectious agent that replicates only inside the living cells of an organism. Viruses infect all life forms, from animals and plants to microorganisms, including bacteria and archaea. Since Dmitri Ivanovsky's 1892 article describing a non-bacterial pathogen infecting tobacco plants and the discovery of the tobacco mosaic virus by Martinus Beijerinck ...

**Canine distemper - Wikipedia**
Canine distemper (sometimes termed footpad disease) is a viral disease that affects a wide variety of mammal families, including domestic and wild species of dogs, coyotes, foxes, pandas, wolves, ferrets, skunks, raccoons, and felines, as well as pinnipeds, some primates, and a variety of other species.. In canines distemper affects several body systems, including the ...

**Radiographic and CT Features of Viral Pneumonia**
May 14, 2018 · Viruses are the most common causes of respiratory infection. The imaging findings of viral pneumonia are diverse and overlap with those of other nonviral infectious and inflammatory conditions. However, identification of the underlying viral pathogens may not always be easy. There are a number of indicators for identifying viral pathogens on the basis of ...

**Epidemiology of Hepatocellular Carcinoma**
International incidence, mortality, temporal trends. Primary liver cancer is the seventh most frequently occurring cancer in the world and the second most common cause of cancer mortality ().The highest incidence rates in the world are found in Asia and Africa (Figure 1) ().Mongolia has the highest incidence at 93.7 per 100,000, but China has the greatest number of cases, due to ...

**Cancer burden in China: trends, risk factors and prevention**
Nov 15, 2020 · China has the largest number of smokers and consumes over 40% of the world’s tobacco 24. In China, smoking was estimated to cause 23.8% of cancer deaths among males and 4.8% among females in 2014. Among these deaths, 10.2% of lung cancer deaths in females and 1.4% in males were attributed to passive smoke 20.

**COVID-19: An Update for Pharmacists and Pharmacy**
Protease inhibitors have been highly effective for treating patients with infections of human immunodeficiency virus (HIV) or hepatitis C virus. Lopinavir interrupts viral maturation of HIV-1 and HIV-2 by inhibiting the cleavage of a polyprotein, thereby resulting in production of immature, noninfectious virions.

**Vaccines: History, Overview and Immunity Development**
Hepatitis B virus can cause a life-threatening and sometimes chronic liver
The vaccines can be given either as individual injections or in a combined injection that contains both Hepatitis A and Hepatitis B. Hepatitis A is an inactivated vaccine while Hepatitis B is a recombinant vaccine. Both are part of the childhood vaccination schedule.
