Plural effusion - Knowledge @ AMBOS

Sep 03, 2021 - Summary. Plural effusion is an accumulation of fluid in the pleural cavity between the lining of the lungs and the thoracic cavity (i.e., the visceral and parietal pleura). The plural effusion fluid is called a transudate if it permeates (transudes) into the pleural cavity through the walls of intact pulmonary vessels. It is called an exudate if it escapes (exudes) into the plural...

Effect of oesmotropic phosphate versus placebo on pleural...

Jan 07, 2012 - Author summary Moderate to severe thoracic or parietal plural effusion is common in the febrile and/or critical phase of dengue virus infection. Pleural effusions are important for preservation of vascular integrity, especially during inflammation, and low pleural extravasation counts may contribute to plasma leakage. Currently, no therapeutic intervention that targets the pathogenic pathway is available...
