**Bone Graft Before Dental Implants: Cost and Procedure**
May 25, 2020 Bone grafts. A bone graft is most often used in restorative dentistry to build up the jawbone before having implant surgery. After significant trauma, infection, disease, or an extended period of time without teeth, your jawbone may need restoration before a tooth implant procedure. That’s because your jaw can actually lose some of its density, making it unfit for ...

"Cortex DYNAMIX implant is one of the most versatile and reliable products on the implant market. It is extremely user-friendly, but its simplicity does not come at the expense of precision. The driver is unique amongst today’s systems. It gently picks up the implant with the help of the plastic ring but also provides a secure hold."
